The iconic Plein-Aircon model from the OFF line by Indel B goes even further: the first 12V air conditioner for camper vans and semi-integrated vehicles powered by only an auxiliary battery is now available in two models with unique features.

Two different air conditioners that meet different functional, aesthetic and structural needs. Two solutions that allow each traveller to explore their own personal outdoor experience, without formal constraints nor on already mapped out routes. The Plein-Aircon 12V RINGLIGHT and the Plein-Aircon 12V LIGHTBOX translate the OFF experience and desire for off-road freedom into new ways of use and unprecedented functionality.

The further you go,
the more it will get you

The greatest revolution of the new Plein-Aircon models lies in the functionality managed by an app with dual connectivity Bluetooth and Wi-Fi.

The app makes interaction with the product intelligent, simple and intuitive: in addition to the classic manual operation, Indel B's innovative **Pre-Adaptive technology** (Smart mode) adapts the operation of the air conditioner by learning from the user's habits and optimizes performance in relation to the weather conditions of the current location or by predicting those of a set future destination. In addition, with the app it is possible to receive information for diagnostics and service purposes.

Plein-Aircon 12V RINGLIGHT

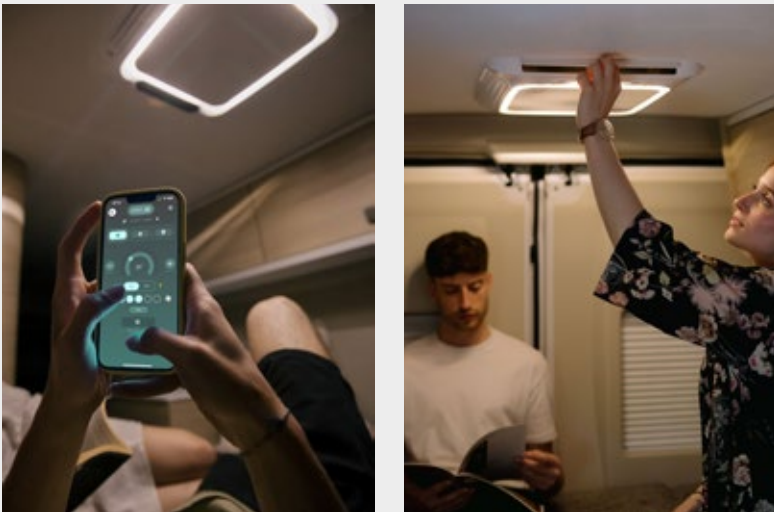

Unlocks expressive creativity

The new Plein-Aircon 12V, redesigned and totally Made in Italy, achieves full efficiency and user-friendliness thanks to the new configuration of the fins. The precision and directional flexibility of the air is optimised, allowing distribution even vertically. RINGLIGHT features a customisable panel with a white or blue LED perimeter light. Customisation allows multiple finishes, fabrics and stickers to be applied to the surface of the panel, integrating the Plein-Aircon with the style of the vehicle's interiors.

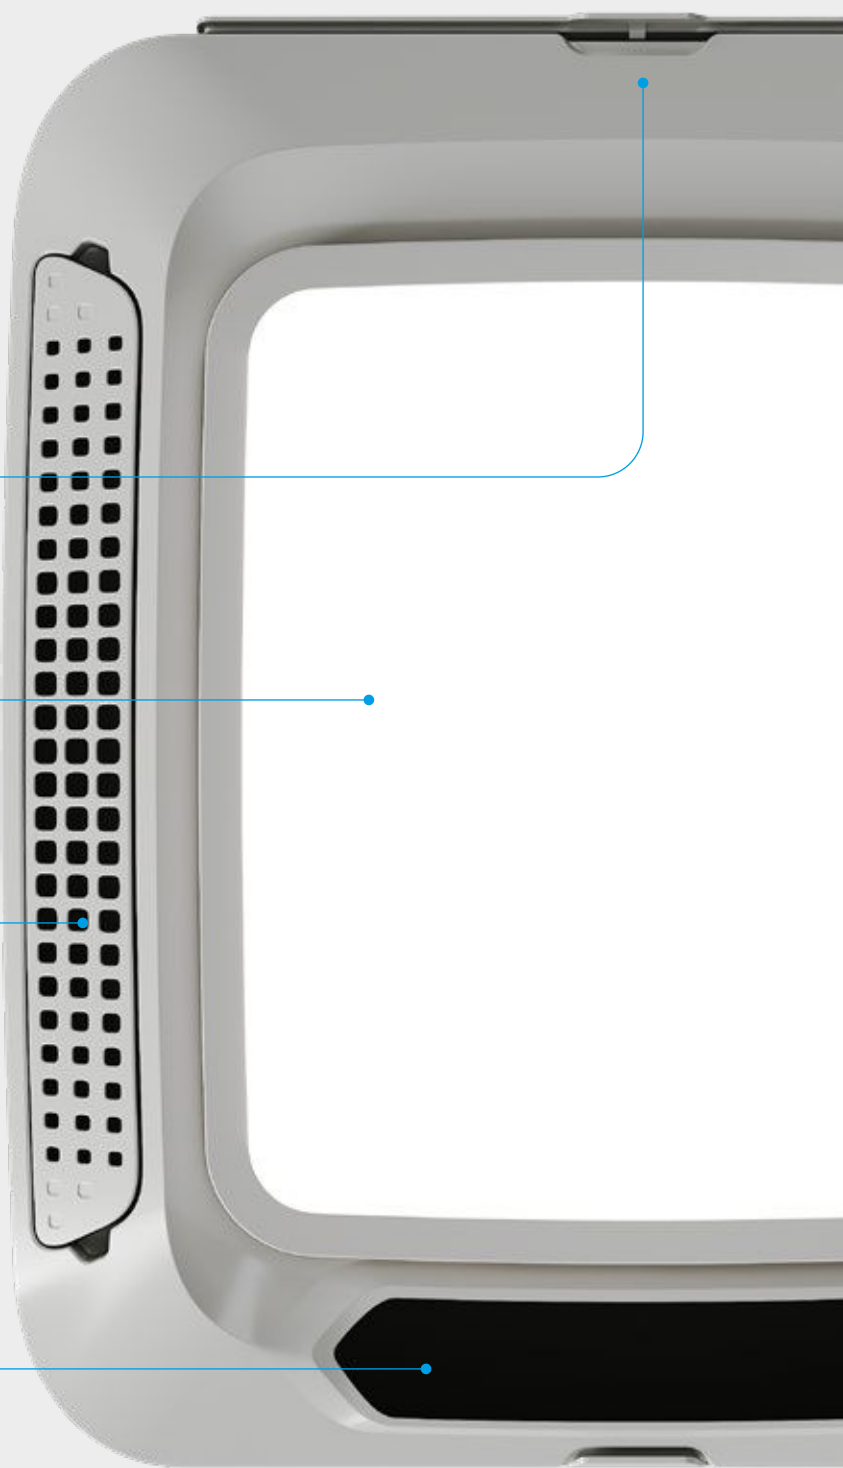

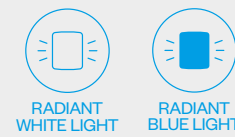

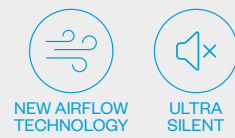

External unit dimensions (HxWxD)	246x670x800 mm
Roof cut-out dimensions (WxD)	400x400 mm
Weight	25,3 Kg
Input voltage	12V DC
Cooling capacity	1200 W - 4100 BTU (max)
12V power consumption	16 AMP/H (AUTO)

Plein-Aircon 12V LIGHTBOX

The feeling of a roof porthole

The new Plein-Aircon 12V, redesigned and totally Made in Italy, achieves full efficiency and user-friendliness thanks to the new configuration of the fins. The precision and directional flexibility of the air is optimised, allowing distribution even vertically. LIGHTBOX, specially designed to return natural light from the porthole, radiates and diffuses white or blue light, the latter of which is ideal for night driving.

External unit dimensions (HxWxD)	246x670x800 mm
Roof cut-out dimensions (WxD)	400x400 mm
Weight	25,3 Kg
Input voltage	12V DC
Cooling capacity	1200 W - 4100 BTU (max)
12V power consumption	16 AMP/H (AUTO)
